

Faster. Better. Easier.

With success!

The image features a large circular inset showing a close-up of the vacuum's arm and hose. The arm is black metal with a blue corrugated hose attached. A white label on the arm reads "MAX LOAD 100kg". The background of the entire advertisement is a blurred industrial or construction site. A worker in a grey and black uniform is bent over, adjusting a component of the vacuum's base. The vacuum itself is orange and black, with a "CAUTION" label on its side. The overall scene is dynamic, suggesting the machine is in use on a job site.

Vacu-Mobil E Original Optimas Quality!

Simple and sooo quiet...

The Optimas Vacu-Mobil E is equipped with a very quiet electric motor. It is in high demand on building sites where noise emissions must be minimized. This makes the Optimas Vacu-Mobil E an ideal machine for laying heavy slabs in, for example, pedestrian areas or residential zones. Concrete and natural stone elements up to a weight of 100 kg can be moved and accurately laid as if they were weightless. Additional well thought out details built into the machine have been enthusiastically received by our customers the first time they used the machine in practice tests. For example, the Vacu-Mobil E's pallet fork tines pick-up pockets provides for fast relocation on a building site.

Optimas Vacu-Mobil E:

- Crane arm: Load capacity 100 kg
Length 3.0 m
360° swing range
- Hydraulic pump: 3 phases 400 V,
0.37 KW, 210 bar max.
- Vacuum pump unit: 3 phases 400 V,
2.2 KW, 0.65 bar vacuum max.
- Transport measurements:
L= 2260 mm, W= 1000 mm, H= 2100 mm
- Weight: 500 kg

Advantages of the Optimas line of vacuum lifters:

- Weightless, accurate, economic laying of kerbs, concrete slabs, natural stone slabs, washed concrete plates, large cobbles, petrol station paving, gutter slabs, retaining wall stones etc.
- The foldable crane arm allows smooth laying of slabs etc. at space-critical building sites, for example along house walls or tree rows.
- The mast can be simply folded by one person in a few minutes. Almost no set-up time, a very compact machine for easy transportation and daily storage on job-sites.
- The vacuum pads are easy to replace using a simple quick-change system.

+++ Advantages of the Optimas Vacu-Mobil E:

- Very quiet electric motor.
- Pallet fork tines pick-up pockets for fast relocation on a building site or for small projects in open terrain.
- The 4 hydraulically controlled supporting legs allow the machine to be balanced easily and provide a secure positioning.
